OLYMPIA

LEPOINT

Rocket Scientist • Award-Winning Author •
TV Science News Personality • Keynote TED Speaker

Olympia LePoint shares her science knowledge
& her personal story, so you find
the answers in front of you.

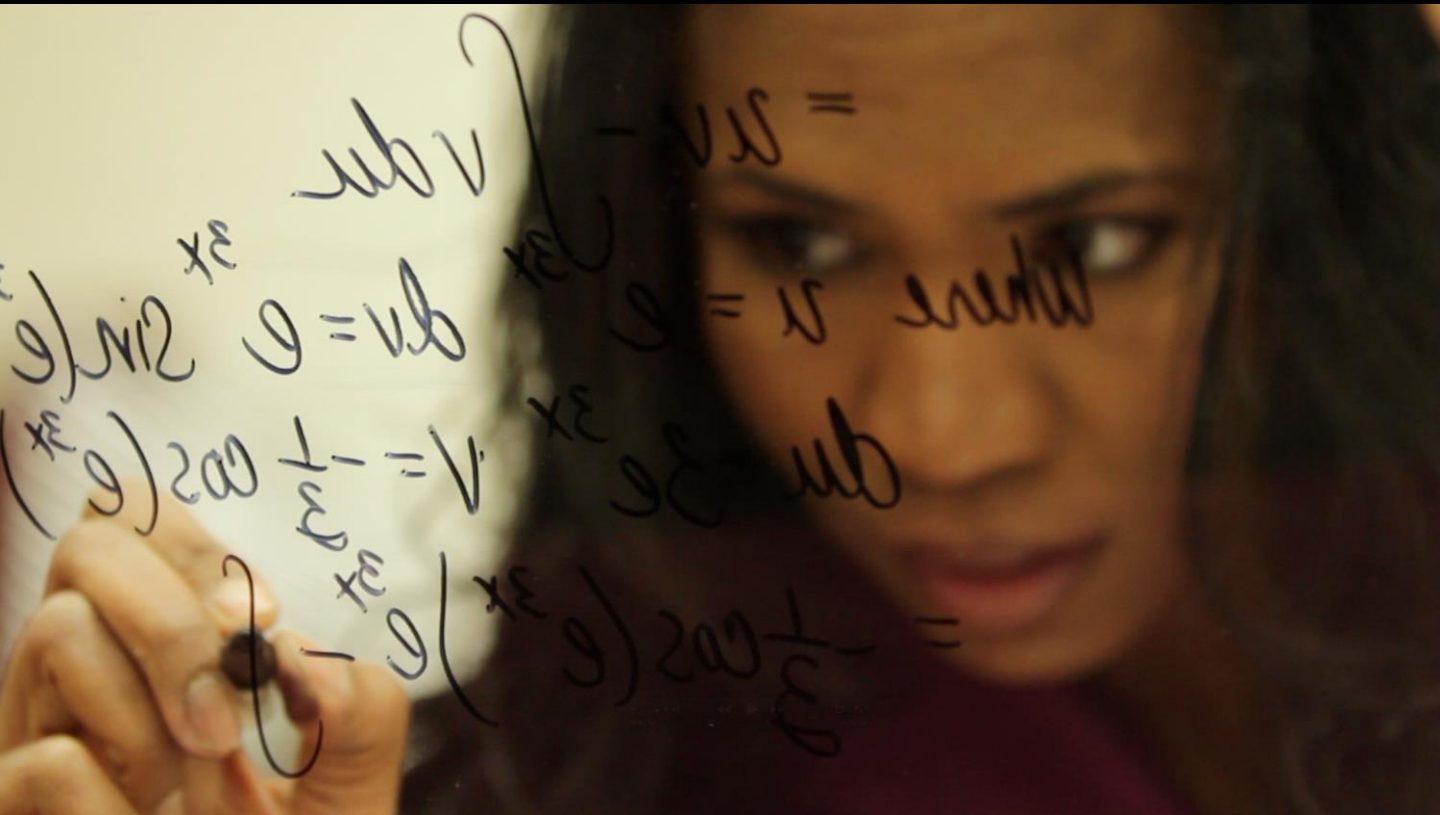

Olympia LePoint

Hailed the “New Einstein” by her fans, and named the “Modern Day Hidden Figure” by **People Magazine** and **Newsweek**, Olympia LePoint is a former NASA rocket scientist, award-winning author and TED speaker of the talk “Reprogramming Your Brain to Overcome Fear.” LePoint helped launch 28 NASA Space Shuttle missions into space. Today, LePoint’s Mission Control Room desk is a science exhibit at the California Science Center in Los Angeles. In her youth, Olympia LePoint overcame severe poverty, childhood trauma, plus failing math scores by reprogramming her mind, which led her to graduate Top 5 from a 6,500 graduating class with degrees in Mathematics.

Featured in major news and media, LePoint has been seen by over 28 million viewers for her appearances as a guest science and technology news expert. She is seen on ‘The Doctors’ in her TED Talk, on NBC News, CBS News, KTLA Morning News, Cheddar News, Amazon Prime TV, ABC News, PBS, MSNBC, FOX News, and on Impact Theory. She has written the award-winning **Answers Unleashed®** educational science book series, which won the 2023 IRWIN Award at the Los Angeles Times Festival of Books.

LePoint’s award-winning, **Answers Unleashed®** book series and online STEM educational videos and platform inspire audiences across the world.

Author Olympia LePoint

From the ages of 21-30, Olympia LePoint was one of the youngest leaders to help launch 28 NASA's Space Shuttle missions into space. Now she shares her knowledge with international audiences.

How Olympia LePoint Went From Failing Math to Building Rockets

June 18, 2021.

WOMEN IN STEM

We asked Olympia LePoint about her path to becoming a rocket scientist, and her advice for young women aspiring to the same career path.

A Part of FutureofBusinessandTech.com

Link: <https://www.futureofbusinessandtech.com/women-in-stem/how-olympia-lepoint-went-from-failing-math-to-building-rockets/>

1

Tell us a little more about your story and your progression from being a kid who struggled in math to where you are now.

I had a lot of issues growing up. We lived in the middle of gang violence, and walking home from school, we didn't know if we'd get home alive. This fear translated into difficulties at school. I took fear with me and allowed it to stop me. At 16, I was tutored by a calculus teacher who volunteered to help struggling students, and it was during that time that I realized that I was smarter than I thought I was. What stopped me wasn't a lack of intelligence, but just the fear in my head. In that moment, I decided that I was going to do things that were really hard. I owed it to myself to do that. We all fail, but those who change their frame of mind create success in the end.

2

What has been your proudest achievement throughout your life, both professionally and personally?

Achieving my bachelor's degree was definitely my biggest achievement. I grew up in inner city LA, where people assume your future is to become a drop-out or a victim of gang violence. I defied those statistics and decided my own future: to become a rocket scientist. When you have a degree, you earn it, and no one can take that away from you. You can take the degree and use it to choose your own future. That's why I'm such a passionate supporter of education.

3

STEM classes have not been popular amongst women and young girls. Why do you think that is, and how do you think it's progressed in the last 10-20 years?

When I first started my career in 1998, I would be the only woman in a room of 200 men. My mentor, Steve Hobart, showed me how to communicate effectively with those men so they could improve the engine design with my knowledge. I learned that women communicate differently than men, and women and minorities bring a new viewpoint to STEM that benefit the workforce. Women have brilliant systems thinking and can find one solution that will solve many different problems. Minorities have a brilliant ability to think outside of the box. Both groups bring a tremendous benefit to STEM fields, and I'm happy to say that now I'm no longer the only woman in a room of 200 men. More diversity is still needed, however. So many people across the planet have brilliant ideas, and tapping into how people think in different ways can create solutions that last a lifetime.

GAME-CHANGER

OLYMPIA LePOINT

WWW.ANSWERSUNLEASHED.COM

Olympia is a force in the science field and the definition of women empowerment, with her entrepreneurial spirit and massive influence around the world. She's been dubbed the 'Modern Day Hidden Figure' by People Magazine, hailed as 'The New Einstein' by her fans, and represents the '21st Century Wonder Woman'. Olympia is best known for helping audiences overcome fear and unleash the brain's power, as detailed in her highly popular book series and international multimedia platform Answers Unleashed. She has shared her wisdom on speaking tours, TV appearances, and TED Talks.

Olympia, where are you from and how did you become an entrepreneur and an award-winning NASA rocket scientist?

I am Olympia LePoint, an award-winning self-help author and rocket scientist who continually forms to reprogram my mind for success, as seen in my TED Talk, "Reprogramming Your Brain to Overcome Fear." In my entrepreneurial journey, I helped launch 28 NASA Space Shuttle Missions to into Space and wrote three self-help, science-based books to inspire people's minds to find answers and unleash innovation across the world. Through my personal story and my Answers Unleashed book series, I show audiences on how to overcome fear and unleash their answers using new thinking methods that I created using science, STEM (Science, Technology, Engineering and Mathematics), and building faith.

My road to success was not a direct road. In fact, I was "Only from The Black." I grew up in the inner city where fear and danger were a part of my childhood. I grew up in South Los Angeles within poverty, and gang violence. I was raised by a single mom who did her best to protect four girls without financial support. There were countless struggles, even that happened in my life, and started finding my truth and science classes because of them. When I landed

to ask for help from my teachers, my life turned for the better. My brilliant mind began to turn on. I realized that fear was a mind trap and not moving forward. If I could remove my own fears, day by day, I could create a new future for myself. I began reclaiming my life purpose, and I reclaimed my best future.

That decision began my journey of becoming an award-winning rocket scientist. I graduated from California State University Northridge in Mathematics, and I later worked launching NASA rockets for nearly a decade.

"[...] I decided to beat the odds and become that ONE. I used my Quantum Decoding method to do it."

After I left the rocket science world, I saw that the U.S. was ranked 28th out of 32 industrialized countries when it came to math and science education. As a result, I became determined to change the national future. In my speaking and book publishing company, I help people overcome their personal fears, master STEM (Science, Technology, Engineering and Math) education, and create the brilliant future they want. My efforts led me to being on TV as a regular guest science expert on CBS News in Los Angeles, giving live and virtual TED Talks, and writing a series of well-known science books seen on Three Global and read in schools and universities across the United States.

How does one become a rocket scientist?

What is your educational background?

You can become a rocket scientist in multiple ways. You can major in aerospace engineering at the university. You can major in mechanical engineering, structural dynamics, fluid dynamics or electrical engineering. Or you can major in physics or mathematics. I chose to earn my degrees in mathematics.

I earned a bachelor's degree in applied mathematics with an emphasis in statistics. I also earned a master's degree in Applied Mathematics, with an emphasis in statistics and chaos theory from California State University Northridge. I was one of the top five graduates of a 6500 graduating class in 1998.

Why statistics, you may ask? Statistics is used with this launching rockets and building every type of equipment or medical device that you can imagine. Statistics is also used in government's census surveys, within vaccine production and in efficiency. Statistics, aka Data Science is a career needed across the world. Why Chaos Theory, you may ask? Chaos Theory is used predict seemingly unpredictable phenomena—like the stock markets' rise and fall, how weather patterns show Climate Change, how we launch to Mars, and how uncontested rocket engine explosions can be prevented—so these will be safety. I learned how to predict the future because statistics and Chaos Theory math predict the future.

We usually have the perception that scientists always work behind the scenes, working in the shadows. How did you come to be under the spotlight and become a public figure?

When I left rocket science and started writing my book series, I transitioned from being a "Modern Hidden Figure" into becoming "The New Einstein." I did not make up these names. People magazine named me "The Modern Day Hidden Figure," and my college students called me "Professor LePoint" and named me "The New Einstein."

When I worked for the companies, I was a hidden person. My job was to perform science and keep it secure. The expectation was to stay hid-

55

ENTREPRENEUR MINDSET SUMMER 2021

Senovva

"We can empower women and BIPOC to become business owners and leaders at corporations."

den and launch people to Space safely. When I chose to leave and start my book publishing corporation, I realized that the only way to promote my books was to be on TV and in the media. The national exposure was hard to handle at first, until I received coaching on how to share my challenging experiences in ways that would uplift all audience members. I was born to speak, and I have the talent to advance human intelligence.

You are also known as the author of the book "Answers Unleashed II: The Science of Attracting What You Want." The Science of Attracting What You Want? How do you overcome your fear of the future in just six effective decisions?

With any great future, you must overcome your fears from the past. In all my LIVE and virtual TED-like talks, I explain that your new decisions attract new opportunities. And here is the catch: you make your decisions based on the top six moments when you experienced fear in the past. As you start making new decisions to overcome old ways of thinking, you start becoming electromagnetic in attracting new opportunities. There is a secret science to your decision-making. Your new decisions change an electromagnetic field around you that pulls in opportunities. It is a quantum, decision-making phenomenon. In my latest book, Answers Unleashed II, I give you mental exercises to pinpoint your top six moments of fear. The way to find your future success, is by going back in time to help yourself see the truth. From that moment, I introduce 6-dimensions of decisions on how you attract new opportunities.

FAITH: How you decide that your life is here on Earth for a powerful reason.

INITIATIVE: The way you can make decisions with integrity, no matter the challenges faced.

INTELLIGENCE: The way that you choose to change your environment, instead of it changing you.

LEADERSHIP: Your commitment to form the truth, and how you will act on true information.

DISCIPLINE: How you choose to multiply your resources and grow "a little" into "a lot."

LOVE: The way that you choose to love yourself and others in a healthy way.

How to use science to shift your mind and accomplish your biggest goals? Can you explain to us the scientific theory called "Quantum Decoding?"

Quantum Decoding says that you can jump through time to select the future that you want.

then you can come back and make six decisions to get there. In my life, I had three future that existed.

Future 1: I could have become a high school dropout. **Future 2:** I could have been caught in gang violence. **Future 3:** I could have graduated college and become a rocket scientist. I literally had three futures, and I chose #3, which was the future I wanted to live out. You have a future that is waiting for you too. You have to make the decision to live it out. With my own personal story, Albert Einstein's General Theory of Relativity and Quantum Entanglement theories plus my Triad Theory of Relativity, I explain how (and why) you can jump into the future that you want. In doing so, you find your answers with Quantum Decoding. In my virtual guest lecture TED-like talk at California State University Northridge Alamogordo, I prove Quantum Decoding with a new math, and I explain that Quantum Decoding is a new decision-making science. You can jump through time because there is an explosive energy in your every decision. Like the sun which has planets rotating around it, you have decisions that rotate around you. They signal for opportunities to approach.

You are also very involved in the defense of women and people of color within the scientific industry. What does BIPOC mean?

BIPOC stands for Black, Indigenous, and People of Color. I remember reading a statistic about BIPOC people in a college class in 1993. I stated, "I am of 11,000 African American women would earn a PhD in the sciences or become rocket scientists. I was shocked. That meant that I had a better chance of being hit by lightning two times, than by becoming a rocket scientist. Through I had to look for odds and become that "one." I used my Quantum Decoding method to do it. I realized that one, I learned to support and uplift women and BIPOC people across the world. Though my missionary education and corporate experiences, I discovered why this statistic was low. The lack of quality education for women and BIPOC and unfair practices kept many women and BIPOC people from succeeding in careers. I share my personal story, history education and decision-making approaches that sheds light on how we together can change the future.

For my birthday, I am an Indigenous woman of 1993. Specifically, my mother is French and Indigenous. I am most familiar with French In-

diagnosis, since I grew up with my mother and my late Indigenous grandfather, Charles LePoint. I learned French and Indigenous healing practices from my late grandfather. I apply these practices to continually heal, create and form fear, and I include my healing knowledge in every one of my educational science books. I became passionate about women and BIPOC from my university education, and when I learned to build on myself in my career. I received one of the best university educations in the world regarding diversity at California State University Northridge. From my U.S. history classes, I learned how over 125 Million U.S. Indigenous people were killed in mass murders, and how their land was stolen. I learned that 12.5 Million people of color were stolen from African countries and forced into massive human-trafficking and 38,000 built the foundation of our current U.S. Economy through slave labor. As result, many American live with unconscious bias in their decision-making today, and they are unaware that people of color comprise the fabric of the United States.

"I am a firm believer that all people - no matter their background - need to know the full history, so historians can decide to create a better future."

Though my women's studies courses, I learned that women were paid only 85% of the men for the same white male counterparts. In the science field, women were paid only 65% of the salary of their white male counterparts. Women leave the Tech Industry at a 45% higher rate than men. To make matters worse, women of color are even less likely to be promoted and have the adequate banking and educational resources in capitalism. We can demonstrate new ways of thinking, and we can create that people are treated with diversity, inclusion and respect moving forward.

What are your upcoming projects?

I am currently doing a virtual TED-like keynote speaking tour for my latest book Answers

Unleashed II: The Science of Attracting What You Want. I have partnered with Dr. Ken Kruparick, and his entire team at All American Entertainment who is promoting my new "Quantum Decoding," virtual talks and becoming bookings for these talks at top universities and colleges, global industrial forums, non-profit organizations, and women's leadership conferences. My live and virtual talks are on my website. With these talks, each organization can purchase an engraved book for their members who are participating in the online event. These talks inspire people to build innovation. I have partnered with Heather Perry and her team of Innovative Artists for new TV show development and production. We are accepting new opportunities to hit product, award-winning content and science shows for TV and multimedia, where I am the main host. I have partnered with Ariana Huffington and her team at Three Global to share the concepts from my book series, and how we can become women and people of color to pursue science, STEM fields. I've partnered with Heather Wong Bequith and her team at KCON PH for to appear on the news and speak about science related topics. From the Black, Latin, Asian, and Richard Himmelfarb's space race to the concerns with STEM education, Artificial Intelligence, Quantum Computing, Cryptocurrencies, NASA News, Science innovation and Climate Change—so people can make wise decisions for a better future.

Mathaphobia: How You Can Overcome Your Math Fears and Become a Rocket Scientist

Struggle with Math? Scared of failing Math tests? Need to encourage a student? If "yes," this book is for you!

Mathaphobia®: How You Can Overcome Your Math Fears and Become a Rocket Scientist by Olympia LePoint is an empowering, thought-provoking, self-help book exposing the emotional struggles individuals face, while learning to read and use math. Using her own challenges and educational triumph as a backdrop, Olympia LePoint discovers the crippling learning disability Mathaphobia®, and does a superior examination into the reasoning behind math fear, through the exploration of distinct Mathaphobia® personalities. With a uniquely innovative three-step strategy, Olympia LePoint shares the method to eliminate math fear for good. As a supplemental education resource guide to create math and real-life solutions, this manual helps adults and pre-college students to ace math – all without doing more math problems!

Your decisions rewire your brain to “beat the odds,” so you become the positive outlier.

Science, Self-Help Books

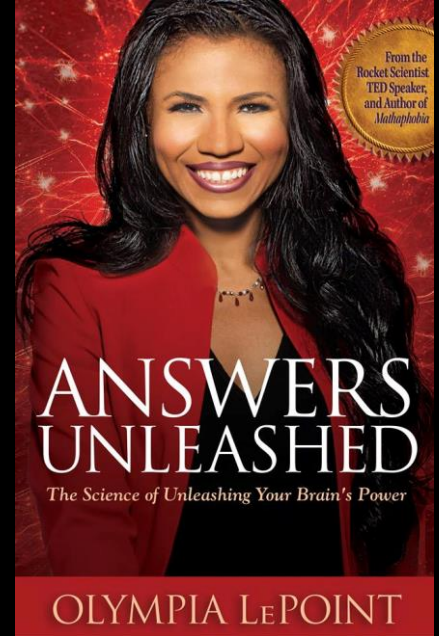

Answers Unleashed :

The Science of Unleashing Your Brain's Power

Countless books have been written about the process of restoring the mind after traumatic situations.

But *Answers Unleashed: The Science of Unleashing Your Brain's Power* by Olympia LePoint is the first self-help brain success book written by an award-winning rocket scientist who overcame her own life challenges to launch 28 NASA Space Shuttle missions into Space.

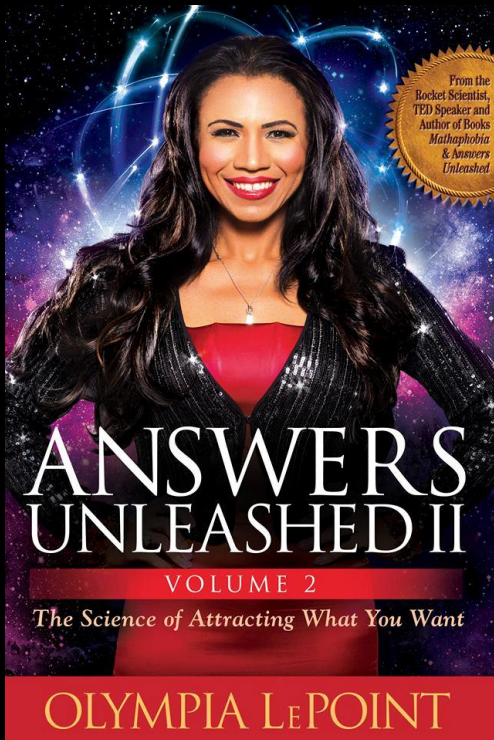

Olympia LePoint helps readers launch their lives into success by revealing the power of the “Triabrain” using “Triabrain Theory of Relativity” that LePoint developed to rewire her own brain. Readers unleash their intuitive abilities, birth great ideas into scientific innovation, and change the course of their lives by attracting lucrative success. You can become a genius at any age!

Answers Unleashed II:

The Science of Attracting What You Want

In LePoint's newest book, *Answers Unleashed II: The Science of Attracting What You Want*, LePoint helps leaders to create the future that they want with a new decision-making science method LePoint calls 'Quantum Deciding.' By making 6 important decisions on a daily basis, a person can create the future that they want. Readers go back into the past and rewrite their personal history, and they can jump to the future to know the right steps for success. The approach is from Albert Einstein's Quantum Entanglement theory, and Olympia LePoint's science theory together with her personal story. She learned to make the decisions that saved her life. She empowers audiences to do the same.

A promotional graphic for the book "Quantum Deciding" by Olympia LePoint. On the left, a full-length photo of Olympia LePoint in a red dress is shown, with her signature "Olympia LePoint" written above her. To the right, a silhouette of a person's head is shown in profile, facing right. The background is a dark blue field filled with glowing binary code (0s and 1s) and a network of blue lines connecting points. A red banner across the middle contains the title "QUANTUM DECIDING" in white capital letters. Below the banner, the subtitle "Make 6 Decisions for the Future You Want" is written in white. In the bottom right corner, there is a small image of the book cover for "ANSWERS UNLEASHED II VOL. 2" by Olympia LePoint, which features a photo of her and the text "The Science of Answering What You Want".

Keynote Programs

Blast Off: A Journey from South Central LA to Launching NASA Rockets

Olympia LePoint tells her personal inspiring story of how she overcame extreme poverty from being raised in South Central Los Angeles, and failing in school to earning her degrees in applied math and later becoming an award-winning NASA rocket scientist. The award-winning author and TED speaker motivates audiences by sharing her **7-Step Success Strategy** for people wanting to overcome adversity, discover their talents, and launch their own life into the direction for success. This motivational speech is geared for all ages, and it inspires people to reach for their own star, and succeed in their own mission.

Beat the Odds and Build New Innovation with Answers Unleashed®

Olympia LePoint reveals how you can use your most challenging experiences to unleash innovation. Through her own adversity, she shares how to beat the odds. She shares her triumphant journey, from being raised in South Central Los Angeles poverty to becoming a NASA rocket scientist and award-winning author, so people find solutions in their lives. Through the contents of her second book *Answers Unleashed®: The Science of Unleashing Your Brain's Power*, Olympia reveals how to use setbacks to guide your next steps, find answers to pressing concerns, and build innovation for a new successful outcome.

Making New Artificial Intelligence Technology Ethical & Accurate

With today's emerging artificial intelligence technology, humans are at another pivotal turning point within innovation. Like when the printing press, the light bulb, and the internet were all created, new artificial intelligence technology is an exciting and concerning topic among world leaders and corporate executives alike. No matter your country's origin, artificial intelligence brings amazing benefits and concerning risks. As an Artificial Intelligence (AI) Ethics Professor, Olympia LePoint believes that Artificial Intelligence is simply a tool, and ethical standards are required to ensure people stay safe. In this talk, LePoint explains how various artificial intelligence technologies develop new innovation, the current ethical concerns regarding its outputs, and the upcoming policies needed to keep people's identity safe.

Keynote Programs

TED TALK: Reprogramming Your Brain to Overcome Fear

Fear is a common emotion that everyone faces when success is just a few feet away. Your success is dependent on removing fear. Now, fear can be removed from your thinking with a 3-step method. Based on her experience supporting NASA's Mission Control, award-winning rocket scientist and author Olympia LePoint devises a new thinking process for reprogramming the human brain to overcome fear. With her triumphant story, Olympia LePoint answers how humans can simultaneously turn off fear and rebuild the frontal brain lobes to accomplish great feats. The ground-breaking method is based from Olympia LePoint's first book entitled, *Mathaphobia*, and her viral TED talk "*Reprogramming Your Brain to Overcome Fear*."

Leadership: Make 6 Decisions for the Future That You Want with Quantum Deciding®

Some people say that your past determines your future, but one rocket scientist says that you can choose the future that you want with targeted decision-making. With a new decision-making method called Quantum Deciding®, Olympia LePoint explains the six decisions to obtain the future that you want. She shares the method from her third book *Answers Unleashed II: The Science of Attracting What You Want*. Olympia LePoint and her book have been featured on NBC News, CBS News, ABC News, MSNBC News, FOX News, Yahoo News, The Doctors, Newsweek and USA Today. LePoint helps audience members remove the six causes of indecisiveness, identify your immediate next steps toward your best future, and shows you how to multiply your resources for success.

Women's Leadership for the 21st Century

Many times, leaders need to build innovative products and provide extraordinary direction, yet women can face an unsupportive staff due to bias. Employee and organizational constraints also halt progress. In this keynote, Olympia LePoint shares her personal stories as a woman leader in an engineering environment. She reveals her proven Quantum Deciding approach which creates innovative solutions and builds a supportive staff. Olympia LePoint empowers leaders to gain organizational support, to use pre-existing resources to catapult innovation, and to build employee satisfaction. The best leaders are also women.
